

Sehda to participate in Strong Angel III

August 8, 2006 -- Sehda, the leading provider of 2-way speech-to-speech translation systems, announced today it will participate in the Strong Angel III integrated disaster response demonstration Aug. 20-26 in San Diego.

In a fictional scenario involving an outbreak of avian influenza, the Arabic version of Sehda's 2-way speech translation system, S-MINDS™, will be used to conduct triage on Arabic-speaking 'patients.'

Strong Angel III is a series of collaborative experiments in which government agencies, technology companies, humanitarian aid organizations and other groups from around the world work together to test "interoperability, reliability and flexibility of proposed social and technical solutions" (Strong Angel III Web site, www.strongangel3.net).

Sehda Inc., based in Mountain View, Calif., is the leading provider of 2-way speech-to-speech translation systems. Its flagship product, S-MINDS™, enables communication between two people who do not speak the same language. In Iraq, S-MINDS™ helps U.S. soldiers communicate with Iraqis in routine situations such as questioning civilians at checkpoints, screening refugees, and providing humanitarian aid. The company also has 2-way translation systems in use in a U.S. hospital.
